AB	This app. purifies bath water with membrane bodies in a membrane tank and is provided with a jet nozzle to clean out fur, dirt, etc., adhering to the membrane bodies by blowing air-mixed water . . Alternatively, the app. is provided with a water current jetting app., an aeration pipe, or a vibrator instead of the jet nozzle to clean out fur, dirt, etc. Loading of membrane modules with fur, dirt, etc. is suppressed, resulting in prolongation of lives of membrane bodies and easy maintenance.
